STQA-1: Test scenarios for the Gmail login page

A. Login page

ID	Test scenario	Expected result	Actual result / Status
L1	Enter a valid email address and click Next.	Password field is shown.	
L2	Leave email/phone blank and click Next.	Error message is shown and the field is highlighted.	
L3	Enter an invalid email address and click Next.	Error says the account could not be found.	
L4	Enter an invalid phone number and click Next.	Error message about the phone number is shown.	
L5	Log in with a valid email address and valid password.	User reaches the inbox.	
L6	Log in with a valid phone number and valid password.	User reaches the inbox.	
L7	Log in with a valid phone number and an invalid password.	Login is refused with a wrong-password message.	
L8	Log in with a valid email address and a wrong password.	Login is refused with a wrong-password message.	
L9	Check the 'Forgot email' function.	Recovery flow starts.	
L10	Check the 'Forgot password' function.	Reset flow starts.	

B. Sign-up page

ID	Test scenario	Expected result	Actual result / Status
S1	Check the message for each mandatory field.	Each empty mandatory field shows its own message.	
S2	Try to proceed without filling all mandatory fields.	User cannot proceed.	
S3	Select a date of birth and check the age.	Age rule is enforced.	
S4	Enter numbers and special characters in First/Last name.	They are not accepted.	
S5	Sign up with all mandatory details.	Account is created.	
S6	Log in with the new account details.	Login succeeds.	
S7	Enter different strings in Password and Confirm Password.	Mismatch error is shown.	
S8	Enter a weak password.	Field warns about the weak password.	
S9	Use an email address that already exists.	Duplicate is rejected.	
S10	Check hints on each form field.	A hint is available for each field.	

C. Mobile application login page

ID	Test scenario	Expected result	Actual result / Status
M1	Mobile: log in with valid username and password.	Login succeeds.	
M2	Mobile: try invalid username or password combinations.	Login is refused each time.	
M3	Mobile: tick 'Keep me signed in' and close the app.	User stays logged in after reopening.	
M4	Mobile: check the default state of that tick box.	It is not selected by default.	
M5	Mobile: log in using social media credentials.	Login works if linked at sign-up.	
M6	Mobile: check 'Forgot password'.	Reset flow starts.	
M7	Mobile: check the layout on a phone screen.	Page fits the screen with no scrolling.	

D. Functional and security test cases (from the manual)

#	Test case	Type
1	Valid username and valid password	Positive
2	Valid username and invalid password	Negative
3	Blank fields and click Submit	Negative
4	'Forgot Password' function	Positive
5	Messages for invalid login	Positive

#	Test case	Type
6	'Remember Me' function	Positive
7	Password shown as asterisks or bullets	Positive
8	Login with new password after change	Positive
9	Login with different credentials in different browsers	Positive
10	'Enter' key works on the login page	Positive
11	Time taken to log in	Performance
12	Font, text and colour as per standard	UI
13	'Cancel' button erases entered text	Usability
14	Page works in different browsers	Compatibility
S1	Characters beyond allowed length in username/password rejected	Negative
S2	Browser Back button after logout does not re-enter system	Negative
S3	Session timeout works	Positive
S4	Different credentials from same browser at same time not allowed	Negative
S5	Same credentials in different browsers at same time	Positive
S6	Login page against SQL injection	Negative
S7	SSL certificate is in place	Positive

Conclusion: login and sign-up pages look simple but need both positive and negative cases covering functional, performance and security checks.
